Danfoss Position Statement on REACH

Danfoss supports the objective of REACH (Registration, Evaluation, Authorisation and restriction of Chemicals, 1907/2006/EC) to further improve the European Union's chemicals regulatory system, including the aim to advance public health and safety as well as the protection of the environment.

Danfoss is neither a manufacturer nor an importer of chemicals and the company does not manufacture articles with intended release of substances. However, Danfoss will inform our customers in case of any use of REACH-substances in excess of the limit allowed on the REACH-candidate list.

Danfoss has set up a process to ensure REACH compliance. Responsibilities and appropriate resources have been assigned to enable us to comply with the candidate list and Annex XIV in relation to our products. Danfoss' REACH organization will make all reasonable efforts to ensure appropriate and timely handling of updates hereto.

The REACH regulations do not require that Danfoss provides analysis data for our products. We will, however, where relevant, on a case by case basis consider appropriate testing and reporting of analyses subject to agreement with respective customers or authorities.

All Danfoss manufacturing facilities are ISO 14001 certified, and compliance to national and international environmental legislation is part of third party certification procedures.

We trust that the above will satisfy your inquiry into Danfoss' compliance with REACH. In case you have any comments or questions please contact Danfoss' at REACH@Danfoss.com.

You are also invited to read more at: <http://www.danfoss.com/AboutUs/Sustainability/REACH/>.

Flemming Lyngge Nielsen
Senior Sustainability Manager

Danfoss products

Danfoss is in terms of REACH a *Downstream User*. That means that the company does not produce, import or supply chemical substances and does not sell products with intended release of chemicals.

All Danfoss products and components are therefore regarded as articles.

This is how we comply at Danfoss

It is the responsibility of each business unit delivering products to customers to ensure that all relevant requirements from REACH are complied with and that the customers are informed as required.

To aid the business units' work with REACH, Danfoss has established a global network of coordinators and specialists to ensure that:

- Danfoss inform customers if we have substances from the Candidate list in a concentration above 0.1% (w/w) in our products.
- Danfoss strive to substitute all substances from the Candidate list that are found in our products in a concentration above 0.1% (w/w).
- Danfoss' facilities in the EU does not manufacture or import chemicals, oils or metals for re-melting from countries outside the EU in quantities over 1t/year.
- Danfoss does not produce or import any articles with intended release.
- Chemicals used at Danfoss' facilities in the EU are only used in strict accordance with the use identified by the supplier or manufacturer.
- Substances on the Annex XIV list are prohibited at Danfoss. The company will not apply for an authorisation to use these substances but will seek to substitute them.
- A safety data sheet is provided with the product if Danfoss supplies customers with chemicals, for example, a paste for thermal conduction. In that case Danfoss has the role of a distributor.

The network has been endorsed by Danfoss Supply Chain Board, a business board responsible for setting Danfoss' direction within the supply chain. The network is maintained by Danfoss Group Sustainability.

Danfoss Group Sustainability monitors the REACH legislation and ensures that relevant information and updates are distributed through the REACH network to provide sufficient information for the network and business areas to react on.
